

Website Grader — Recruitment vs. Career-site modes

Graded with the Shazamme Career Site Grader. Each group is scored in its own mode (different pillar weights & checks), so the two tables are reported separately and are **not** directly comparable to each other.

Shazamme career sites (sutherland / tollgroup) — top of career group

2

Ungradable — kofi-group & BHP hard-block the crawler (403)

1 • Recruitment / staffing sites

Scored in **recruitment** mode · pillar weighting: SEO 22% · GEO/AI 20% · CX 22% · Brand 14% · Tech 13% · Conv 9%

Recruitment mode rewards discoverability (SEO+GEO = 42%) and candidate experience — how agencies get found and drive applications.

#	Site	Provider / ATS	Overall	Grade	SEO 22%	GEO/AI 20%	CX 22%	Brand 14%	Tech 13%	Conv 9%

2 • Corporate career sites

Scored in **career_site** mode • pillar weighting: SEO 18% • GEO/AI 15% • CX 25% • Brand 25% • Tech 10% • Conv 7%
Career-site mode rewards employer brand + candidate experience (Brand+CX = 50%) — EVP, culture content and application flow, not job-board SEO.

#	Site	Provider / ATS	Overall	Grade	SEO 18%	GEO/AI 15%	CX 25%	Brand 25%	Tech 10%	Conv 7%

Analysis

- 1. **The two modes tell different stories — by design.** An agency site and a corporate careers site are judged on different things, so they're scored and ranked separately. Recruitment weights SEO+GEO at 42% (get found, rank for "[sector] jobs"); career-site weights Brand+CX at 50% (EVP, culture, application experience). The same URL would score differently in the other mode.
- 2. **Career sites are where Shazamme wins decisively.** On the career-site rubric the two Shazamme sites — sutherland **80** and tollgroup **78** — are the only B+ grades. Every incumbent-ATS career site trails: svhm 67, linfox 62, smiggle 55, reece 54. The gap is exactly where the rubric weights hardest — **Brand** (Shazamme 92/89 vs Workday/Pageup 33–71) and **Technical** (88/91 vs 62–78). Headline pitch: career sites on Workday / Pageup / SuccessFactors underinvest in the two things that matter most for talent attraction.
- 3. **In recruitment, Shazamme is strong but the field is tighter.** designandbuild **81**, ambition/beaumontpeople **80**, and a B+ cluster (trsresourcing 82, sharpandcarter/marqueestaffing/avidtr 79) sit together. Shazamme's edge is **Brand + Technical** (designandbuild 93/90, aspectpersonnel 93/93, beaumontpeople 83/87) — consistently top-tier — while pure recruitment-SaaS rivals win on raw SEO (trsresourcing 90, mjdrecruitment 90) but give ground on brand/technical polish.
- 4. **Weakest performers:** caminosearch **57** (SEO 47, conversion 20 — almost no apply/engagement signals), schired **57** (SEO 34 — near-invisible), impellam **64** (SEO/GEO 52/47 despite strong brand). In the career group, reece **54** (brand 33, conversion 33) and smiggle **55** are the clearest rebuild candidates.
- 5. **GEO / AI visibility is the industry-wide gap.** It's the lowest pillar in both groups (recruitment avg 63, career avg 54) — almost no one is optimised for AI answer engines. First-mover advantage for whoever fixes it.
- 6. **Two sites hard-block automated grading (403):** kofi-group and BHP return 403 to the crawler (Cloudflare-class WAF) on both local and production runs. Not a score — but the same block also stops the AI crawlers that increasingly drive candidate discovery.

Method: Shazamme Career Site Grader, run per-group in its correct mode via the production service (PageSpeed + headless render enabled). Overall = weighted blend of the six pillars using the mode weights shown in each header. Single run per site — treat ±3–5 as noise. WAF-blocked sites (403) can't be crawled by the tool or by AI crawlers.
